SUMMARY

Senior Game Engineer & Prototyper with 10+ years of experience designing and shipping commercial titles across Steam, Android, PC, and Mac. A versatile "creative technologist" expert in Unreal Engine 5 (C++) and Unity (C#), specializing in rapid prototyping, multiplayer networking, and gameplay programming. Proven track record of delivering high-quality experiences by pivoting quickly between engines, architecting scalable systems, and collaborating directly with designers to validate experimental gameplay mechanics.

TECHNICAL SKILLS

Game Engines: Unreal Engine 5, Unity

Languages: C++, C#, Blueprint, PHP, JavaScript, MySQL, HTML/CSS, C

Networking: Photon Fusion, Photon Engine, Unreal Networking, AWS GameLift

Cloud & Tools: AWS Lambda, DynamoDB, Cognito, API Gateway, Git, SVN, Plastic, Unity Cloud, Jira

Platforms: PC, Mac, WebGL, iOS, Android, Steam

Other: Performance Optimization, Gameplay Programming, AI System, Physics, Agile/Scrum, Mentorship

EXPERIENCE

Lead Unreal Programmer

December 2024 – Present

Mars Games

Winter Park, FL

- Architected a cloud-native save system using AWS Lambda and DynamoDB, enabling experimental cross-game progression and seamless world travel.
- Prototyped and implemented a multiplayer replication system that synchronized procedural world events across clients with minimal latency.
- Developed custom debugging tools and editor extensions to accelerate iteration time for the design team.

Lead Unity Programmer

May 2023 – September 2024

LiquidX

Malaysia, KL

- Took ownership of a stalled project and rapidly prototyped a new Roguelike combat loop, including physics-based movement and skill trees.
- Designed and engineered a hexagonal procedural generation system, allowing for replayability and rapid level testing.
- Bridged the gap between creative and technical teams, directly implementing UI flows, VFX hooks, and enemy AI behaviors.

Lead Unity Programmer

April 2021 – April 2023

DoubleCoconut

Yerevan, Armenia

- Served as the primary technical bridge for a TCG game, integrating art assets, defining UI architecture, and implementing complex card logic.
- Built automated build pipelines (CI/CD) for mobile and web, reducing iteration loops for the QA and design teams.
- Optimized runtime performance for low-end devices, enabling high-fidelity visuals on constrained hardware.

Senior Unity Programmer

October 2018 – March 2021

Badbadake Haft Aseman

Tehran, Iran

- Designed and programmed an entire open-world ecosystem, including procedural dungeons, enemy spawners, and non-linear quest logic.
- Created custom level design tools that empowered non-technical designers to tweak gameplay variables in real-time.
- Implemented core RPG mechanics from scratch, including inventory, save/load serialization, and event triggers.

EDUCATION

Full Sail University

Master of Science in Game Design (M.S.)

Winter Park, FL

November 2024 – November 2025

Islamic Azad University

Master of Science in Business Administration

Rasht, Iran

September 2012 – September 2015

AWARD

- Released Fractality, the Best Game of the Year winner at the 10th Digital Media Festival (Iran).
