SUMMARY

Senior Game Engineer with over 10 years of experience shipping commercial titles across Steam, mobile, and PC. Expert in Unity (C#) and Unreal (C++), specialized in rapid prototyping, multiplayer networking, and gameplay programming. Proven ability to navigate large, complex codebases quickly, solve difficult problems, architect scalable systems, and collaborate across teams.

TECHNICAL SKILLS

Game Engines: Unity (Primary), Unreal Engine 5

Languages: C# (primary), C++, Blueprint, Node.js, JavaScript, MySQL, JSON, XML

Platforms: PC, Mac, WebGL, iOS, Android, Steam, PS4

Cloud & Tools: Visual Studio, Rider, Git, Jira, CI/CD, TeamCity, Unity Cloud, AWS GameLift, Photon, Unreal Networking

Other: Performance Optimization, Gameplay Programming, AI System, Physics, Agile/Scrum, Mentorship

EXPERIENCE

DoubleCoconut · San Francisco, CA

January 2026 – Present

Senior Unity Engineer

- Worked remotely on numerous mid-core titles for clients.
- Delivering features on time through close, day to day communication with the team.

Mars Games · Winter Park, FL

December 2024 – November 2025

Lead Unreal Programmer

- Created a cloud save system using AWS Lambda, DynamoDB, and Unreal networking, enabling seamless world travel for an AAA game title.
- Implemented a multiplayer replication system that synchronized procedural world events across clients.
- Developed custom debugging tools and editor extensions to accelerate the design team's iteration time.

LiquidX · KL, Malaysia

May 2023 – September 2024

Lead Unity Engineer

- Lead the development of a Roguelike game with a combat loop, skill trees, and physics based movements.
- Implemented a hexagonal procedural map and enemy spawn system.
- Supported the programming team's growth by running code reviews and helping them design clean, scalable architecture for AI, UI, and other core features.
- Deployed TeamCity for build automation.

DoubleCoconut · Yerevan, Armenia

April 2021 – April 2023

Senior Unity Engineer

- Architected a complex trading card game (TCG), bridging the gap between art and engineering.
- Set up CI/CD pipelines with Unity Cloud Build and GitHub to reduce build times and accelerate team iteration.
- Profiled and optimized the game to run high-fidelity visuals smoothly on mobile devices.

Badbadake Haft Aseman · Tehran, Iran

October 2018 – March 2021

Senior Unity Engineer

- Architected open-world systems, including procedural dungeons, enemy spawners, and non-linear quest logic.
- Built custom level design tools that let designers adjust gameplay variables in real time.
- Programmed core RPG mechanics from scratch, handling inventory, save/load serialization, and event triggers.

EDUCATION

- **M.S., Game Design** — Full Sail University (Valedictorian, 2025)
- **M.S., Business Administration** — Azad University of Iran (2015)
